Railee Dane D. Borinaga

Summary

This month, I participated in TryHackMe's Love at First Breach event to learn and challenge myself. The First challenge stumped me with vulnerabilities, I was not prepared for a new dating application. I encountered significant difficulties that required a lot of studying in advanced web exploitation techniques.

Roadblock

- The Challenge: Was in finding what the next step is, it took way too long for me to understand what I'm looking at. And when I learned what I needed to do, I had to do a lot of trial and error.

To move past the stall, I took a break from the terminal to consult my resources:

- YouTube Walkthroughs: I searched for similar vulnerabilities to see how other people thought through the problem.
- PortSwigger Academy: I used PortSwigger's documentation to understand the theory behind the specific vulnerability.

Key Takeaways

- Reading a bit more on NoSQL injection, or manual research on PortSwigger or YouTube provides the help needed to see the bug.
- Understanding the *why* of the exploit made the final execution much satisfying to achieve.
